UnknownFilesystemError

An unknown error occurred while reading or writing files to disk.

See Docs Reference

It can be caused by many things, eg. missing permissions or a file not existing we attempt to read. Check the error cause for more details.

content/mutable-data-store.js:337:13

Open in editor

```
337        throw new AstroError(AstroErrorData.UnknownFilesystemError, { cause: err });
                  ^
338      }
339    }
340    /**
341     * Attempts to load a MutableDataStore from the virtual module.
342     * This only works in Vite.
343     */
344    static async fromModule() {
345      try {
346        const data = await import("astro:data-layer-content");
347        const map = devalue.unflatten(data.default);
```

Stack Trace

```
UnknownFilesystemError
    at MutableDataStore.writeToDisk (file:///D:/A/Web/SportZens20/SportZens/HP/node_m
    at async Timeout._onTimeout (file:///D:/A/Web/SportZens20/SportZens/HP/node_modul
```
